

Connecting People, Process Information & Data

Workflow Designer

FREE – No Tricks or Traps... Simply Good Software

Visual Workflow Mapping +

Workflow Designer includes features such as template shapes, automated placement of shapes, and links to other maps documents or even business analysis information. *Imagine one centralized spot for all information, in the right order required for the job that aligns with the workflow or procedure, every time...*

Instant chart and text collaboration

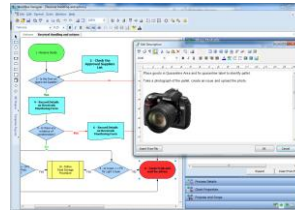

At each step you can enter the step's workflow or procedural information. This ensures both accuracy and sense, up front, without rework or guessing sequences of information. Have these instantly available. *Save on expensive flowcharting packages that need a word processor additional to the drawing tool and do not have many of the features in Workflow Designer.*

Output to fully formatted procedure documentation

With the chart and information securely locked together you can instantly create a formatted hard copy procedure document direct to your favorite word processor or pdf with the chart and text always in synchronization! With outputs including who does what, job sequence information, work instruction information, document links or links to other charts as well as approval and revision history. *Stop guessing who does what and when, with Workflow Designer you can quickly determine key responsibilities through any procedure or workflow.*
